

Aquagold Fine Touch

AQUAGOLD Fine Touch is a microneedling treatment that uses 20 microscopic needles to deliver the patient's chosen drug or biologic beneath the dermis, to any spot on the face, neck, or chest. Each needle is smaller than a strand of hair, made of surgical-grade stainless steel and coated with 24k gold. The steel core provides strength, and the gold coating prevents skin irritation.

The treatment enhances the results of nearly any in-clinic procedure and is nearly painless, thanks to the perpendicular application. The chosen treatment solution of the patient is loaded into the glass applicator, which releases the solution through the microneedles and directly into the skin. The most common anti-aging treatments patients choose are hyaluronic acid fillers and botulinum toxins.

An additional benefit of the microneedle process is the body's natural healing response to repair each of these microscopic wounds, which is an increased production of collagen and elastin. This further improves and smoothes your skin's appearance, helping reduce fine lines and other signs of aging.

Preparation:

Though microneedle treatments do not cause bleeding, patients are still encouraged to discontinue use of blood-thinning medications and supplements in the two weeks prior to receiving this procedure. These items include NSAIDs, aspirin, vitamin E, and Ginkgo biloba.

Anesthesia:

As the procedure is virtually pain free, anesthesia is not necessary.

After cleansing your skin, your chosen cocktail will be added to the glass applicator. The practitioner then presses the device directly against your skin, allowing the microneedles to penetrate from a perpendicular angle. The practitioner moves the applicator across the treatment area, delivering the treatment just beneath the dermis. The process is painless and takes an average of 20 minutes, depending on your individual needs.

For the best results, patients are encouraged to complete more than one treatment. Your practitioner will advise the most appropriate treatment schedule for your needs.

Patients may resume normal daily activity immediately, though they should avoid direct sunlight for three days and wear sunscreen during that time, and avoid heat such as saunas, steam rooms and swimming.

There are virtually no risks. Side effects include possible redness lasting less than 24 hours, and sun sensitivity lasting approximately three days.

Results vary according to the anti-aging agent used. However, the collagen and elastin boost lasts three to four weeks for most but up to six months for patients undergoing multiple treatments.

Treatments with Aquagold may be administered as a standalone treatment with a customised cocktail or following a superficial skin peel known as Obagi Blue Radiance Peel. Administering a peel prior to the Aquagold will enhance the treatment overall by removing the dead skin cells enabling the Aquagold and serum to penetrate more effectively.

Customised Serum

Your customised cocktail will contain one of the solutions below, Ultimate radiance or Targeted Toning, dependent upon your individual requirements additional growth factors, vitamins, enzymes & Botulinum Toxins are added. These customised cocktails will address the needs of the skin

Ultimate Radiance

A high-performance serum with the purest Hyaluronic Acid, PDRN and growth factors. A rejuvenating blend that treats signs of aging and helps to regenerate damaged skin.

Targeted Toning

An intensely moisturizing serum with the purest Hyaluronic Acid, Glutathione, Niacinamide, and Tranexamic Acid. This gentle yet effective serum helps even out uneven tones, brightens skin and reduces inflammation.

Gold & Glow

Indications General Rejuvenation

- Lifting
- Elasticity
- Free Radical Protection
- Moisturising
- Reduces Redness

Gold & Lite

Indications Uneven Skin Colouration & Pigmentation

- Skin Cell Regulation
- Skin Lightening
- Free Radical Protection
- Moisturising

Gold & Smooth

Indications Mature & Sun Damaged Skin

- Skin Cell Regulation
- Lifting
- Elasticity
- Free Radical Protection
- Moisturising

Gold & Soothe

Indications Sensitive Reactive Skin

- Elasticity
- Free Radical Protection
- Moisturising
- Reduces Redness

Botulinum Toxin Type A (BTA)

The AQUAGOLD device can deliver small amounts of botox below the skin surface. The result is that skin appears relaxed, smoother, and glowing with improved skin tone and pore size. The addition of BTA to the device will not give you the same effects as BTA injections directly into the muscle.

Risks & Complications

- Mild Discomfort
- Redness & Erythema
- Swelling
- Irritation & or Itching
- Dry Flaky Skin
- Allergic Reaction to the serum or additive
- Allergic Reaction to BTA

Please see Patient Guide for Obagi Blue Radiance Peel for information, risks & complications, please note that the side-effects may be increased when the two treatments are combined.

Clinic Terms of Business

I understand that though complications are uncommon, they do sometimes occur. It is possible that side effects not described may occur and indeed that a complication not previously reported may occur for the first time. I understand if I suffer any adverse reactions that are not expected, or concern me, I must contact my practitioner, and book a review appointment. MD Medical Aesthetics Ltd cannot take responsibility for complications or results that have not been reported, assessed, documented and managed in a timely manner. Whilst I have been advised of the probable result, this cannot be interpreted as a guarantee. Results vary from one individual to another.

I confirm that the medical health history form has been completed truthfully and I am fully aware that withholding medical information, including history of previous treatment, may be detrimental to the safe and optimal outcome of any treatment administered. If there are any changes in my medical history, I must inform the practitioner.

I confirm that I have been provided with verbal and written information about this treatment which includes aftercare and follow up advice and I agree to follow the aftercare advice and understand this reduces risk of adverse reactions and helps ensure optimum results.

I understand information about me will be treated as confidential and access to it restricted in accordance with the Data Protection Act, unless specific permissions given.

By consenting to treatment you accept the clinic terms and conditions as outlined:

- You are satisfied that the treatment has been explained comprehensively
- That the possible risks and side effects associated with the treatment have been fully discussed and understood
- That you have taken sufficient time to process and consider the information provided and any questions have been answered to your satisfaction, before making a decision to proceed with the agreed treatment plan.
- You consent to my medical records being shared with appropriate professional staff
- You accept emergency intervention treatment if required
